Education

Rizal Technological University

Bachelor's, Computer Engineering - Fourth Year (Waiting for Graduation day)

Boni, Mandaluyong

August 2026

Thesis: LEAP: Automated Bioprocessing System Of Leaves Into Raw Powder For Diverse Biological Applications

Relevant Coursework:

Dean Lister (2022)

Dean Lister (2023)

Nagpayong High School

With Honors

Nagpayong, Pinagbuhatan, Pasig City

May 2022

La Immaculada Concepcion School

With Honors

May 2021

Capstone and Projects

(Academic & Technical Projects)

Campus Network Floor Plan with CCTV & WiFi Design — 3rd Year, 2nd Semester

- Designed a campus floor plan with strategically placed WiFi access points and CCTV cameras
- Created a functional Cisco Packet Tracer network simulation
- Configured IP addressing, network hierarchy, and device connectivity
- Simulated working CCTV and network node communication

Automatic Parking System (Capstone Project) — 3rd Year, 1st Semester

- Developed the web-based front end displaying real-time parking slot availability
- Designed and implemented a vehicle entry and exit history log system
- Integrated the website with the miniature automated parking system

Experience

Full-Stack Developer Intern | Department of Education (DepEd)

- Conceptualized and built a data visualization website utilizing Google Sheets API to display automated, real-time analytics as viewable data.
- Secured administrative datasets by locking editing privileges, ensuring a tamper-proof viewing experience for end-users.

Skills & Interests

Technical: Java, AutoCAD, Git, Arduino Programming, Cisco Packet Tracer (Networking), PCB Design Software, HTML, CSS, Javascript, and SQL

Language: Filipino & English

Interests: Software Development, Databases

Trainings

Getting Started with Google Kubernetes Engine Workshop – Trainocate

December 2025

In this workshop, I learned the fundamentals of containerized applications and orchestration using Google Kubernetes Engine (GKE), shifting my perspective from raw application code to automated infrastructure management. Through a mix of architectural deep dives and practical hands-on labs, I learned how to package software with Cloud Build, deploy resilient workloads across different GKE modes, and manage clusters using command-line tools like `gcloud` and `kubectl`.
